

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Black Gyr Falcon (*Falco rusticolus obsoletus*) in **Rhode Island**.—In looking over some newly-received bird skins in the collection of Mr. Jas. P. Babbitt of this city, I came across a specimen, a fine female in nearly full plumage, of this rare Falcon, which I succeeded in purchasing and added to my collection. It was shot by Mr. Arthur Scudder at Tiverton, R. I., on December 26, 1896. He was duck shooting from a boat over wooden decoys, and at the time the Gyr Falcon was shot it was hovering over the decoys, as if preparing to pounce upon one of them. I referred it to this form by Ridgway's 'Manual,' and after carefully studying over Mr. William Brewster's five series of Gyr Falcons, I felt still more certain of its identity. — A. C. BENT, *Taunton, Mass.*

Golden Eagle in New Jersey.—Mr. J. H. Fleming of Toronto writes me that August 9, 1897, a live immature Golden Eagle (*Aquila chrysaetos*) was offered him for sale by its captor, a colored man, who had recently caught it near Long Branch, New Jersey.—FRANK M. CHAPMAN, *Am. Mus. Nat. Hist., New York City.*

A New Name for Dryobates v. montanus.—Since the name *montanus* seems to be preoccupied in the genus, I would suggest that the name *monticola* be adopted for the Rocky Mountain race separated by me under the name of *montanus* (Auk, XIII, 1896, p. 32). So far as I have been able to ascertain, *monticola* has not been used in the genus *Dryobates*. — A. W. ANTHONY, *San Diego, Cal.*

Sennett's Nighthawk (*Chordeiles virginianus sennetti*) at **Madison, Minn.**—August 13, 1891, I secured a Nighthawk that is very much lighter in color than any specimen of *C. v. henryi* that I had ever seen. I was inclined to believe that it was a juvenile of the latter.

On August 15, 1894, I secured another specimen of this very light form. Last spring I sent the latter specimen to Professor Robert Ridgway, who pronounced it *C. v. sennetti*.

As Mr. L. B. Bishop states (Auk, Vol. XIII, p. 134), Sennett's Nighthawk cannot be mistaken for *henryi*. Both of my specimens are very light colored, and lack the white (in ♂) and tawny throat patch (in ♀) of *C. virginianus* and *C. v. henryi*.

My first specimen was a wounded bird when secured. I kept it caged for 24 hours, and when it died and I dissected it I found its stomach full of small insects and a few small grasshoppers.

The following are the data of the two specimens:

Collection Albert Lano, ♂: Length, 9.25; extent, 24.00; wing, 10.00; tail, 4.32. Weight, 2½ ounces. August 13, 1891. Collected at Madison, Minnesota.

Collection Albert Lano, ♂: Length, 9.00; extent, 22.25; wing, 8.25; tail, 4.00. Weight, 2¼ ounces. Collected at Madison, Minnesota.
